SCHEDULE II(N) SURCHARGE FORMULA TO BE APPLIED IN CASES WHERE SURFACE DRAINAGE IS CONNECTED TO THE UTILITY'S SANITARY SEWER SYSTEM

Where the utility has discovered that a customer's roof drain, down spouts, storm sewer, or other similar facilities conducting surface water have been connected to the Utility's sewer system, and such customer has failed to take appropriate action, within thirty (30) days of receipt of a demand by the Utility in accordance with the Rules and Regulations of the Public Service Commission, to eliminate such connection, a surcharge will be imposed upon the customer calculated on the basis of the following formula:

$$S = A \times R \times 0.0006233 \times C$$

- S - The surcharge in dollars
- A - The area under roof and/or the area of any other water collection surface connected to the sanitary sewer, in square feet
- R - The measured monthly rainfall, in inches
- 0.0006233 - A conversion factor to change inches of rain x square feet of surface to thousands of gallons of water
- C - The Utility's approved rate per thousand gallons of metered water usage.

The utility shall not impose the surcharge unless, and until, the customer has been notified by certified mail, return receipt requested, or by hand delivery, that it has been established by smoke testing, dye testing, or on-site inspection that rain or other surface water is being introduced into the sanitary sewer system at the customer's location, and that the customer has not acted within thirty (30) days from receipt of such notice to divert the water from the sanitary sewer system.

Said surcharge shall be calculated and imposed for each month that said condition continues to exist. Failure to pay the surcharge and/or correct the situation shall give rise to the possible termination of water service in accordance with the Rules and Regulations of the Public Service Commission of West Virginia.

SCHEDULE IIISURCHARGE FORMULA TO BE APPLIED IN CASE OF USERS PRODUCING UNUSUAL WASTE

The charge for the treatment of unusual waste will be calculated on the basis of the following formula:

$$C_i = V_o V_i + B_o B_i + S_o S_i$$

C_i = charge to unusual users per year

V_o = average unit cost of transport and treatment chargeable to volume, in dollars per gallon

V_i = volume of waste water from unusual users, in gallons per year

B_o = average unit cost of treatment, chargeable to Biochemical Oxygen Demand (BOD) in dollars per year

B_i = weight of BOD from unusual users, in pounds per year

S_o = average unit costs of treatment (including sludge treatment chargeable to total solids, in dollars per pound

S_i = weight of total solids from unusual users, in pounds per year

When an unusual user is to be served, a preliminary study of its wastes, and the cost of transport and treatment thereof, will be made. Waste containing materials which, in the judgment of the Utility, should not be introduced into the sewer system need not be handled by it. The results of this preliminary study will be used to determine the feasibility of the proposed sewer service and the charge thereof, based upon the formula set out above.

Thereafter, unusual sewage will be monitored on a regular basis and at the conclusion of each fiscal year, based on the investigation aforesaid and audit of the Utility records, new cost figures will be calculated for use in the above formula. The cost of establishing the monitoring facilities shall be paid by the unusual user. Based on these audited figures, additional billings covering the past fiscal year will be made for payment by each unusual user, or refund given by the Utility, as the case may be. Such audited figures will then be used for the preliminary billing for the next fiscal year, at the end of which an adjustment will be made as aforesaid.
